

All of our Christmas trees are cut as late as possible so you can be assured that they are as fresh as they can be.

Think of a real Christmas tree like a bunch of flowers – it may be a little bigger but they are a natural product and should be treated like one.

CHRISTMAS TREE CARE

If your Christmas tree is not to be decorated right away, try to keep it stood up outdoors, and if possible with the trunk submerged in water. You will be amazed how much they can drink

Before the Christmas tree is brought indoors, try to cut about 2 cm off the trunk of the tree. This will help the Christmas tree take a well-deserved drink throughout the festive period

Choose a location for your Christmas tree that is away from direct heat sources (radiators, fires etc) and draughts. This will stop the Christmas tree drying out faster

Stand the Christmas tree in a water holding Christmas tree stand for ultimate freshness

Keep the water topped up everyday; you will be amazed how much a Christmas tree will drink!

Follow these Christmas tree care tips and your tree should look fantastic until well after Christmas
